Trans- / Intratympanic Injection Needle

Specially designed needle for safer and easier transtympanic injections to the middle ear. The needle is 90mm long and has a specially designed sharpened tip end which is 2mm long and holds an outer diameter of only 0,4mm. The principle of “tube in tube” is used to create a natural stop against the tympanic membrane when injecting. Designed in association with Prof Måns Magnusson of the ENT clinic at Lund University Hospital.
